

Jasen Nicely

Senior Full-Stack Software Developer
Mckinney, Texas

A NOTE FROM JASEN

Greetings!

I've been writing software professionally for 15 years, and I still get genuinely excited when a hard problem lands on my desk. That curiosity is probably the thing that defines me most as a developer — more than any language or framework on my resume.

For the past several years I've been building full-stack systems at SAP Concur, working primarily in Go and TypeScript/React. The work has ranged from greenfield features to security hardening to legacy migrations, and I've learned to be comfortable in all of it. One project I'm particularly proud of was a data processing system I built for a law firm client: their existing process took a full week to run. After I rewrote it in Go with a SQLite backend, it ran in 12 seconds. That kind of outcome — digging into a real problem, thinking it through carefully, and delivering something that actually changes how people work — is exactly what I find most satisfying about this craft.

I'm drawn to smaller teams because I like being close to the work and the people. I thrive in environments where you're expected to think, not just execute, and where the problems are real enough that creative solutions actually matter. I'm a self-taught developer at heart, which means I'm used to figuring things out and I never really stop learning.

I'd love the chance to bring that energy to your team. Thanks so much for your time — I hope we get to talk.

EXPERIENCE

SAP Concur — STAT Team

2017 — Present · Promoted to Senior Technical Consultant, 2023

Architected full-stack platform features in Go, TypeScript, React, and MSSQL. Led the end-to-end Announcement System across two codebases (30+ coordinated PRs), and hardened platform security with token invalidation, XSS fixes, SHA-512 hashing, and MIME whitelisting.

SAP Concur — RAD Team

2013 — 2017

Diagnosed and resolved complex client issues in travel automation systems, built custom solutions to client-specific requirements, and supported clients running proprietary mid-office software.

SAP Concur — Implementations

2011 — 2013

Configured and shipped automation for travel-industry clients. Built business logic for ticketing, invoicing, refunds, and quality control — translating business requirements into working code.

Property Tax Processor (Contract)

Side project

Designed a Go + SQLite pipeline for processing fixed-width property tax files with county-specific calculations. Took processing time from one week down to twelve seconds — a 99.9% improvement — for a law-firm client.
